**Date:** 14/12/2017

**Author:** Immacolata Moretti

**SUBJECT:**

**Nordic Kit option availability**

---

Dear Madam, dear Sir,

With this communication we would like to inform you about the "Nordic kit" option availability for specific climate condition.

In the following pages you will find more detailed information about:

1. Description
2. Benefit
3. Availability
4. Incompatibility

## **1. Description**

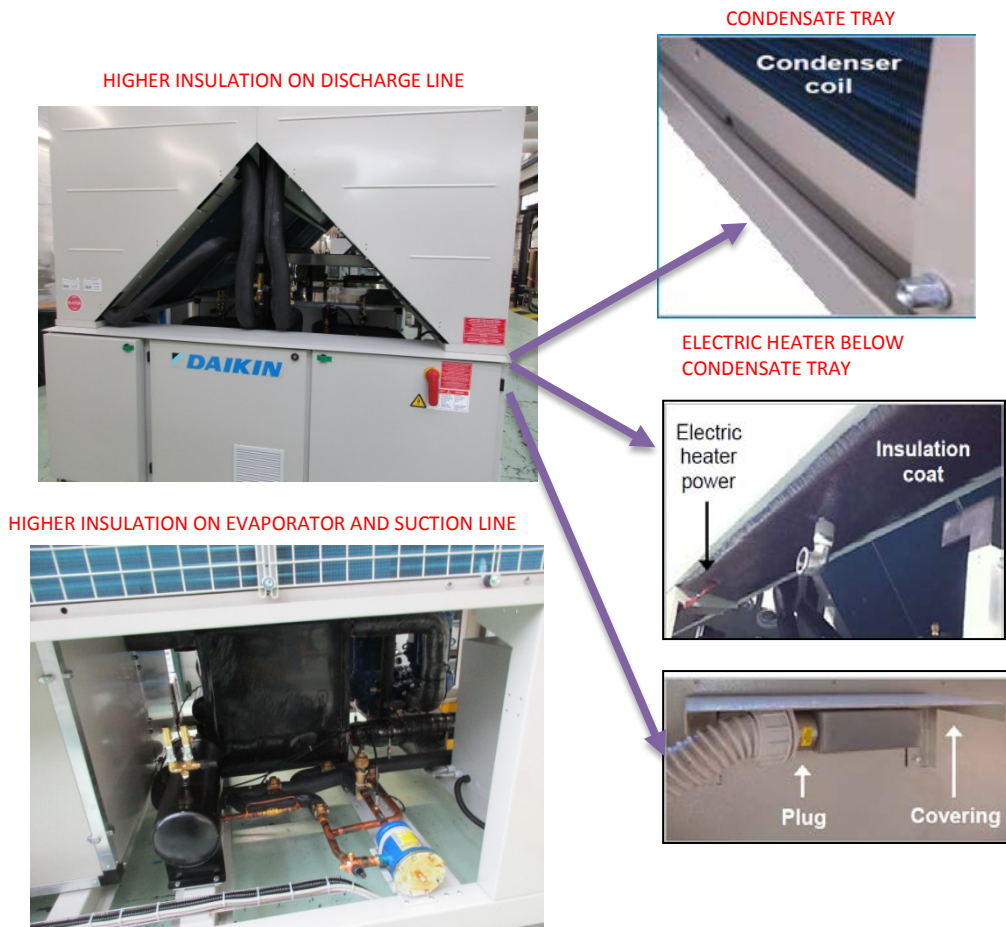

The option is provided for heat pumps and is necessary for very cold climate conditions. It is composed by:

- Higher level of insulation on the evaporator, suction and discharge lines (EWYQ-F, EWYD-BZ, EWYQ-G)
- A condensate tray heater protected by insulating material in order to avoid freezing of the water (only for EWYQ-F and EWYD-BZ)
- Additional covers for plugs positioned at the back side of the electrical panel

The Nordic kit option (number 114 in the Price list) is offering enhanced drain pans and water discharge line, electric heaters on the pans protected by insulating material and additional covers for plugs at the back side of the electrical panel.

It brings benefits below 0°C ambient temperature. It is recommended in case of high humidity or snow environment. **It is required for operation below -5 ° C ambient temperature.**

In addition, under the trays there are some joints to connect hoses on-site which are helping to drain the water from the coils to a desired location for the end-user, thus avoiding water/ice on the walking area around the units.

## 2. Benefit

- Improved chiller operating conditions in heating mode

## 3. Availability

- Available for heat pumps: EWYQ-F, EWYQ-G, EWYD-BZ

## 4. Incompatibility

- No incompatibility with other options

In case of questions please do not hesitate to contact your Daikin representative.
